

Mitel MiTeam for MiCollab

Enhanced collaboration for teams

MiTeam is the natural extension of today's team collaboration experience that more closely aligns to how teams actually work together in the always-on, mobile-first workplace.

A Better Way to Collaborate

MiTeam is a workstream communications and collaboration (WCC) tool that provides a highly collaborative workspace for team-based meetings, conversations, and content collaboration.

Reduce organization silos and increase your speed to market with an embedded application that extends past your company walls to mobile employees and beyond to external team members.

KEEP PROJECTS MOVING FORWARD

Team projects can often be sprawling and hard to organize. Ideas, action items, decisions and documents can exist in multiple locations and formats, including email, IMs, voicemail, online storage, individual hard drives, and more. This makes it hard to quickly find or share information.

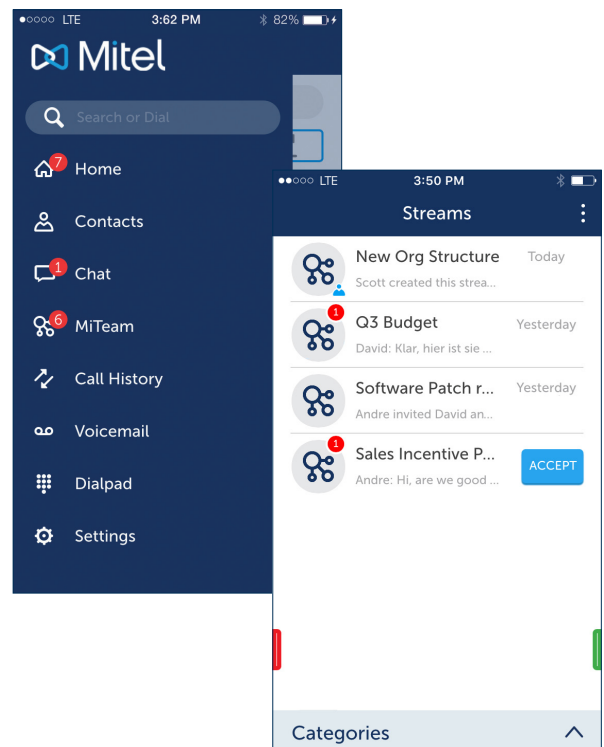

Key Benefits

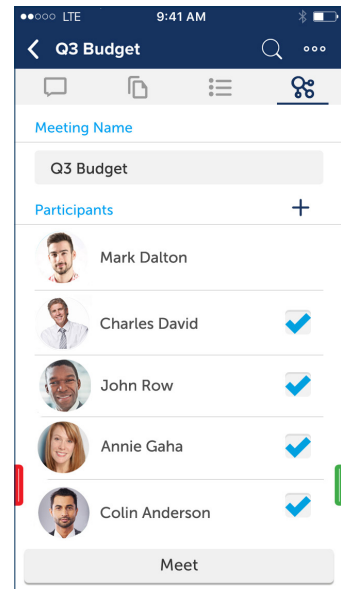

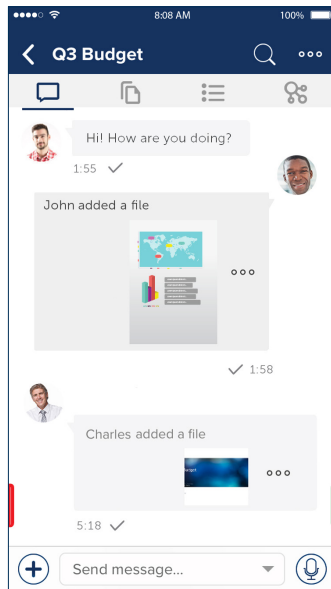

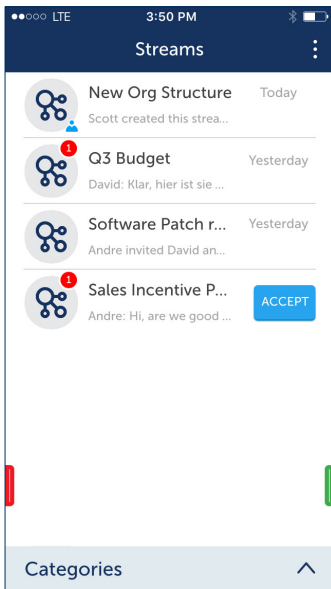

MiTeam is a mobile-first tool built to support how teams collaborate that helps to break down barriers, increase productivity, speed time-to-market, and reduce email.

MiTeam seamlessly integrates into MiCollab to allow you to effortlessly collaborate with teams of any size, including powerful messaging, content sharing, white boarding and real-time voice and video meetings. All the collaboration tools you need are at your fingertips in an intuitive and open environment.

With MiTeam, you can:

- Keep up with projects, stay connected with colleagues and clients, and eliminate cumbersome emails with powerful layers of embedded collaboration.
- Consolidate teamwork capabilities into a single window pane, centralizing chats, content sharing, collaborative white board sessions, pictures, videos, presentations, and add rich graphic and vocal annotations.
- Integrate and embed external services directly into your MiTeam experience to automate alerts, seamlessly import content and annotate files, never leaving the application.
- Expand teams past the physical confines of your own org to include remote employees, anywhere around the globe.
- Enable new team members to come up to speed quickly by seeing interactions with full context, access to documents shared, view recording of meetings and track project tasks.

Keep it all Together

MiTeam seamlessly synchronizes everything relevant to your team into Streams, making teamwork easier and faster – whether your project lasts a day or a year, with two people or twenty.

Be More Productive

Streams are persistent collaborative workspaces, which continuously archive your team's history of messages, content, annotations, and tasks for future reference.

Real-time, Anytime

Instantly start a real-time voice or video collaboration session with colleagues, partners or customers, directly from your mobile device, with advanced call-control capabilities.
